Two months internship program with two minor and one major project under the guidance of Mr Suman Sekhar (mentor at YHills)
Experiencing, exploring and learning more about the Tech world

PROJECT

Project : Time Capsule Messenger

In this app, users can write messages and have them delivered at a future date.

How It Works: Users type out a message and pick a future delivery date.

They can choose who gets the message:

A specific person or multiple (via email)

Themselves (like a future note-to-self)

The Public Time Capsule (so anyone can read it after the set date).

Project : Chat-App

It is a real-time chat application where users can interact with each other.

Tech Stack:

Frontend: React + Tailwind

Backend: Node.js with Express

Database: MongoDB
